表目錄
表 2-1. Effect of FMAC on 0, 4, 8 weeks body weight of CCl₄ chronic treated rats

表 2-2. Effect of FMAC on liver SOD, Catalase, GSH-Px activity in CCl₄ chronic treated rats

表 2-3. List of liver genes expression in CCl₄ chronic treated rats

表 3-1. PCR primer sequences and expected size of amplified products

表 3-2. Effect of FMAC on DMN chronic treated rats liver SOD, Catalase, GSH-Px activities

表 4-1. Effect of FMAC on cyclophosphamide- or 5- fluorouracil-treated mice spleen weight and blood leukocyte

表 4-2. Effect of FMAC on body weight and urine volume of cisplatin treated rats

表 4-3. Effect of FMAC on cisplatin treated rats blood urea nitrogen and urine creatinine clearance

表 4-4. Effect of FMAC on contents of malondialdehyde (MDA), glutathione and protein in the kidney of cisplatin treated rats

表 4-5. Effect of FMAC on carrageenan induced rat paw edema

表 4-6. Effect of FMAC on plasma extravasation response to compound 48/80, bradykinin and prostaglandin E₂ in rat skin

表 4-7. Effect of FMAC on adjuvant arthritis in rats

表 4-8. Effect of FMAC on type I – IV allergic reaction

表 5-1. Effect of FMAC on small intestinal digestive enzymes in rats

表 5-2. Effect of FMAC on malondialdehyde, glutathione and protein contents of stomach and small intestinal mucosa in rats
表 5-3. Accumulated urine after 6 hours oral administration of FMAC in rats .................................................................................................................. 78

表 5-4. Sodium, potassium and chloride ions contents in accumulated urine after 6 hours oral administration of FMAC in rats ...................... 78

表 5-5. Effect of FMAC on mean blood pressure and heart rate in spontaneous hypertensive rats ................................................................. 79

表 5-6. Chronic effect of FMAC on mean blood pressure and heart rate in spontaneous hypertensive rats ............................................................. 80

表 6-1. Chronic effect of FMAC on lipid peroxidation in the brain and plasma of rats ........................................................................................................ 90

表 6-2. Chronic effect of FMAC on Protein contents in the brain of rats ........... 90

表 6-3. Chronic effect of FMAC on lipid peroxidation, glutathione and protein contents in the various tissues of rats ................................................. 91

表 6-4. Chronic effect of FMAC on lipid peroxidation and glutathione content in the red blood cells of rats ............................................................. 93

表 6-5. Chronic effect of FMAC on activities of superoxide dismutase (SOD), catalase and glutathione peroxidase (GSH-Px) in the livers of rats ........................................................................................................ 93

表 6-6. Chronic effect of FMAC on activities of superoxide dismutase (SOD), catalase and glutathione peroxidase (GSH-Px) in the red blood cells of rats ........................................................................................................ 94

表 7-1. Body weight changes in rats orally treated with the filtrate of fermented mycelia of *Antrodia camphorata* (FMAC) for 28 days ........................................................................................................ 101

表 7-2. Hematological findings in rats treated orally with the filtrate of fermented mycelia of *Antrodia camphorata* (FMAC) for 28 days ........................................................................................................ 102
表 7-3. Blood chemistry in rats treated orally with the filtrate of
fermented mycelia of *Antrodia camphorata* (FMAC)
for 28 days.................................................................103

表 7-4. Urinary finding in rats treated orally with the filtrate of
fermented mycelia of *Antrodia camphorata* (FMAC)
for 28 days.................................................................105

表 7-5. Absolute and relative organ weights in rats treated orally
with the filtrate of fermented mycelia of *Antrodia camphorata*
(FMAC) for 28 days......................................................107
2-1. Effect of the FMAC on CCl₄ chronic treated rats liver weight ...............28
2-2. Effect of the FMAC on spleen weight of CCl₄ chronic treated rats .................................................................29
2-3. Effect of the FMAC on GPT activities of CCl₄ chronic treated rats ...30
2-4. Effect of the FMAC on GOT activities of CCl₄ chronic treated rats ....31
2-5. Effect of the FMAC on serum albumin (ALB) concentration of CCl₄ chronic treated rats ........................................32
2-6. Effect of the FMAC on serum A/G ratio of CCl₄ chronic treated rats ........................................................................33
2-7. Effect of the FMAC on prothrombin time of CCl₄ chronic treated rats ......................................................................34
2-8. Effect of the FMAC on liver protein contents of CCl₄ chronic treated rats ....................................................................35
2-9. Effect of the FMAC on liver lipid peroxidation (LPO) of CCl₄ chronic treated rats .............................................................36
2-10. Effect of the FMAC on liver hydroxyproline contents of CCl₄ chronic treated rats ..........................................................37
2-11. Effect of the FMAC on liver glutathione contents of CCl₄ chronic treated rats ..............................................................38
2-12. The photomicrographs of liver section taken from rats and stained with hematoxylin-eosin. ........................................39
2-13. The photomicrographs of liver section taken from rats and stained with Masson’s trichrome. .....................................40
3-1. Effect of FMAC on DMN chronic treated rats liver weight (A) and spleen weight (B) ..........................................................51
3-2. Effect of FMAC on DMN chronic treated rats serum GOT (A) and
GPT (B) activities ................................................................. 52
3-3. Effect of FMAC on DMN chronic treated rats serum albumin (A)
and A/G ratio (B) in rats ......................................................... 53
3-4. Effect of FMAC on DMN chronic treated rats liver protein (A)
and hydroxyproline (B) contents ............................................. 54
3-5. Effect of FMAC on DMN chronic treated rats photomicrography
of liver section that stained with Masson trichrome .................. 55
3-6. RT-PCR products analysis of FMAC effect on liver type I (A)
and type III (B) collagen contents in rats with chronic liver injury
induced by DMN ................................................................. 56
3-7. RT-PCR products analysis of FMAC effect on liver type I (A)
and type III (B) collagen contents in rats with chronic liver injury
induced by DMN ................................................................. 57
5-1. Chronic effect of FMAC on the caecal Lactobacillus perfringens
contents in rats ................................................................. 81
5-2. Effect of FMAC on the gastric acid secretion volume (A) and
acid output (B) in pylorus-ligated rats ................................. 82
5-3. Effect of FMAC on intestinal motility (A) and gastric emptying
(B) in mice ................................................................. 83
